

EASY, FAST, ACCURATE

WIPL-D Pro CAD 2024

*Enhanced, smooth
and stable modeling
and import*

New:

- ☞ Significantly increased stability:
 - Geometry modeling
 - Booleans, assemblies
 - Attributes handling
 - Simulation engine
- ☞ Enhanced features (Sweep, Crop, Wrap, Copy Layer,...) and accelerated for complex inputs, applicable to general entities
- ☞ Improved import for:
 - Native CAD and WIPL-D Pro projects
 - Geometry files, AutoCAD files
- ☞ New options:
 - Repair tool for removing redundant vertices for better mesh and higher efficiency
 - Drag&drop to assembly in Project tree
 - Regions in Project tree
 - Symbol table manipulation by click
 - Set simulation frequencies step by step
 - Plate Domain integrity check
 - Recover body regions in import

Features:

- ☞ Solid modeling using built-in primitives (curves, surface bodies and solids)
- ☞ Import from and export to various CAD formats with efficient model repair and defeaturing
- ☞ Easy manipulations and Boolean Operations
- ☞ Quadrilateral mesher optimized for HOBFs
- ☞ Full support for symbolic modeling, symmetry, GPU acceleration and other standard WIPL-D features
